ISRAEL

2025

I've been a Product Manager since I was born, but I only discovered it in the last decade.

Overview

I am a seasoned Product Manager with hands-on experience turning ideas into successful Web and SaaS products.

Over the years, I've led cross-functional teams—working closely with developers, designers, marketers, and executives - to deliver innovative solutions that align with both user needs and business goals.

In my role at Carpay, I developed the company's core SaaS escrow digital wallet, while building the R&D team from the ground up and ensuring regulatory compliance.

Prior to that, I drove the creation of Kala CRM, managing everything from market research to customer acquisition and establishing it as a leading Israeli CRM solution.

With a background in managing web development departments, UI/UX design, and Agile processes, I'm skilled at simplifying complex challenges into actionable plans. My experience spans product management, marketing strategy, and business development, and **I've always focused on building products that deliver real value to both users and organizations.**

Career Evolution

2013

RestartIT Group

Project Manager &
Customer Success Officer

Began as an Account Manager, promoted to lead full-stack R&D with 12+ developers, delivering projects for major clients like Israel Railways, Bank Leumi, and Disney.

2015

Flyeast (Ofakim Group)

Digital & Technology
Manager

Led digital transformation, built in-house R&D, and developed a custom CRM and core products, enhancing efficiency across R&D, IT, and marketing.

2017

Kala CRM (Sortex)

Product Manager

Developed Kala CRM, led product strategy, marketing, sales, and customer success, driving adoption and organizational change for dozens of businesses.

2023

Carpay Ltd

Product Manager

Led the development of a SaaS fintech escrow wallet, built in-house R&D, and established tech infrastructure, payments, and Open Banking systems.

And the clock keeps ticking

Recent Recommendations

Tzhaki Reichenstein - CEO

Carpay Ltd

[Linkedin](#)

I highly recommend Liron as an outstanding Product Manager. Liron is dedicated, thorough, and skilled at consulting the right people, ensuring everyone feels involved. He bases his decisions on research, not assumptions, and asks insightful questions to avoid overlooking details. Liron fosters a collaborative environment and consistently leads teams toward success.

I would gladly work with him again in any future role. He is a valuable asset to any team.

Sharon Urban - VP R&D

Carpay Ltd

[Linkedin](#)

working with Liron was a pleasure.

Together, we transitioned development to an in-house team. Liron's ability to bridge business needs with technical solutions made a significant impact. His collaboration skills strengthened the bond between product and development teams.

Beyond his leadership, Liron is a supportive and inspiring colleague, always focused on finding the best solutions.

Daniel Zafir - Dev Leader

Carpay Ltd

[Linkedin](#)

I had the opportunity to collaborate with Liron.

Liron played key role in leading the product development, guiding us through building a digital wallet with an integrated escrow feature. His leadership and clear communication were crucial. Liron is an excellent mentor, always ensuring the team had the needed support while balancing technical and product challenges. It was a pleasure working with him, and I highly recommend him for any leadership role in product development.

Yossi Melamed - Founder & CEO

RestartIT Group

[Linkedin](#)

In his role, Liron managed a team of web developers and was responsible for the studio's business development and client relationship management, primarily working with social media and advertising agencies. Under his leadership, the company successfully developed hundreds of websites, applications, blogs, systems, and more.

Liron entered the field without prior experience in technology, but his natural curiosity and determination to excel drove him to independently master a variety of web development languages, as well as the essential processes of product characterization and development.

He played a pivotal role in institutionalizing and expanding the studio's operations.

Liron not only fostered the growth and development of his team members but also strengthened client relationships and significantly expanded the scope of the studio's activities.

Liron quickly became an invaluable partner to the company's clients, who sought his advice on numerous matters.

As the CEO of the company, I too relied on his expertise and dedication to drive our overall success. His commitment is unparalleled—he is attentive to every detail, ensuring nothing escapes his radar, whether on a personal or professional level.

Liron works tirelessly, often responding to emails and calls at unconventional hours when necessary.

He approaches every challenge with remarkable patience, even when dealing with demanding clients.

His dedication is complemented by a warm and approachable personality, strong professionalism, a methodical approach to work, and genuine care for those around him.

Liron is a true asset to any organization.

I wholeheartedly recommend him and am confident that wherever he contributes, he will achieve great success and inspire those he works with.

Wishing him the best of luck in all his future endeavors!

	✓ Mockups, Prototyping	✓ Self-Starter & Autodidact
	✓ Automation and Integration	

PROFESSIONAL EXPERIENCE

★ Product Manager - [Carpay](#) (03/2023 – Present)

Led the development of the company's core SaaS fintech product (escrow digital wallet) and ancillary services. Oversaw the in-house R&D transformation from outsourced development. Defined infrastructure, customer service methodologies, and business automation workflows.

- Responsible for establishing the company's technological infrastructure from scratch.
- Directly managed the R&D department and creative teams (content, UX/UI); additionally, registered as the company's compliance and risk manager.
- Established credit cards and bank accounts payment and financing system using Open Banking regulation.

★ Product Manager - [Kala CRM \(Sortex\)](#) (07/2016 – 03/2023)

Initiated the development of Kala CRM at an Israeli software house (the most advanced Israeli CRM). Responsible for market and competitor research, selecting appropriate integration suppliers, feature characterization / prioritization, and most importantly, recruiting strategic customers.

- Planned and executed the product roadmap and marketing strategy, ensuring alignment with KPIs and OKRs.
- Led business development, sales operations, and customer success initiatives, working with diverse stakeholders to implement tech-driven organizational changes.
- Working with dozens of businesses and entrepreneurs, learning and adapting to their needs and implementing organizational changes by using Kala's tech.

★ Digital & Technology Manager - [Flyeast \(Ofakim Group\)](#) (02/2015 – 07/2016)

Led the global organization's digital transformation, established an in-house R&D department, and managed cross-functional teams of internal staff and external suppliers.

- Spearheaded the development of a tailor-made CRM to streamline enterprise activities, improving operational efficiency across R&D, IT, and marketing functions.
- Planned and executed the company's core product development, including an agents management system with embedded engines for flights and travel tickets.

★ Project Manager & Customer Success Officer - [RestartIT Group](#) (01/2013 - 11/2014)

Started as an Account Manager in a software company founded by Mamram graduates, then promoted to manage all Dev projects, responsible for overseeing product development from A to Z.

- Initiated the creation of a full-stack R&D department and managed over 12 developers.
- Delivered numerous projects for clients such as Israel Railways, Bank Leumi, Applied Materials, Disney, and more.

EDUCATION & MILITARY SERVICE

- ★ B.A. in Media & Communication Studies, The Max Stern Yezreel Valley Academic Studies (2009 – 2012)
 - Specialization in Audiences, Marketing, and Consumer Behavior
- ★ Team Commander, Border Police Unit, IDF (2004 – 2007)

Main Projects

Kala CRM's Project

The biggest project I've ever been involved in

Kala CRM is an advanced CRM system designed specifically for Israeli businesses.

As the Product Manager, I led its development from concept to market, focusing on addressing unique customer needs and driving business efficiency.

The screenshot shows the Kala CRM interface with a navigation bar at the top containing various icons and labels like Pages, Leads, Orders, Members, Accounting, Tasks, Calendar, Reports, Assets, Setting up the system, Links and abbreviations, communication, Registrations, Arriving at the workshops, and Arriving at courses. The main content area is titled 'Reports' and displays a 'Conversions report by agent broken down by source' for 14 items. The report includes filters for Period (Last 7 days), From date (27-12-2024 00:00), To date (02-01-2025 23:59), Distribution by responsible user (yes), and Distribution by source (- Without -). A 'Clear' button is also present. Below the filters, a table provides detailed data for each responsible user.

Responsible user	Enquiries created	Successful closures	Success rate	Success rate by source	Success rate by agent
- No one is responsible -	0	0		20.3%	
Yoav	2	0	0%	20.3%	0%
Eden	71	13	18.3%	20.3%	18.3%
Herut	71	12	16.9%	20.3%	16.9%
Michal	97	22	22.7%	20.3%	22.7%
Sherry	9	2	22.2%	20.3%	22.2%

During my role at Flyeast (A previous company I worked for), I was tasked with designing, sourcing, and implementing a CRM system tailored to the company's unique needs.

After conducting extensive research and participating in numerous meetings, it became clear that no existing solution could fully meet our requirements, leading me to partner with Sortex company that committed to bringing our vision to life, **and they delivered on their promise.**

Within a year, we built a prototype that exceeded expectations and sparked interest in bringing it to other companies.

Inspired by this success, I joined Sortex to refine the system, and together we built a bootstrapped company focused entirely on the CRM product.

Every feature was developed for real customer needs, earning widespread trust and loyalty, and turning Kala CRM into a thriving business rooted in innovation.

Kala CRM Overview

90 years of human labor filled with code,
research, experience, and successes

Goal

Revolutionizing Business Management Standards with Comprehensive 360° CRM Solutions.

Role

- # Conducted market and competitor research.
- # Defined and prioritized features based on customer needs.
- # Recruited strategic customers for early adoption.
- # Managed the product roadmap and marketing strategy.
- # Collaborated with R&D, sales, and customer success teams to ensure seamless execution.

Challenges & Solutions:

Major Challenge 1:

Selecting the right integration partners to meet diverse customer demands.

@ Solution:

Conducted rigorous evaluations and collaborated with stakeholders for seamless integrations.

Major Challenge 2:

Recruit the initial customer base with the initial POC we created.

@ Solution:

Recruiting clients from similar sectors, offering tailored features within milestones, and developing cross-functional capabilities on a retainer basis.

RESULTS

- # Successfully launched a CRM adopted by dozens of businesses within the first year.
- # Improved client operations and decision-making through tailored features.
- # Delivered a scalable, user-friendly platform praised for its intuitive design and functionality.

\$ Increased customer satisfaction and efficiency across multiple sectors.
\$ Positioned Kala CRM as a leading solution in the Israeli market.

{In Hebrew}

Carpay's Project

financial technology solution for analogous problem

At Carpay, I spearheaded the establishment of the product and development department, focusing on creating a cloud-based service designed to enable individuals worldwide to conduct joint transactions in a fair, secure, and regulated manner.

The core challenge addressed was the financial uncertainty inherent in complex transactions, such as car purchases.

Traditionally, one party must act first - either the buyer transfers funds to the seller, or the seller transfers ownership to the buyer - leaving one side temporarily vulnerable to risks like fraud, delays, or transaction disputes.

Carpay was founded to resolve these challenges by introducing an innovative solution: A digital social escrow trust wallet, carefully supervised and regulated by authorities.

Developing such a product posed significant technical and regulatory challenges, but it successfully provided users with a secure and transparent transaction platform.

Carpay Overview

Guiding audience adoption of a new product through strategic education and awareness initiatives

Goal

Driving Fintech Innovation with Escrow Digital Wallets.

Role

- # Defined the product vision and roadmap, aligning with business objectives.
- # Established the company's technological infrastructure from scratch.
- # Managed cross-functional teams, including R&D, UX/UI, and creative departments.
- # Ensured compliance with Open Banking regulations and implemented automated workflows.
- # Built a payment and financing system integrating credit cards and bank accounts.

Challenges & Solutions:

Major Challenge 1:

Transitioning development from overseas teams.

@ Solution:

Recruited and built a skilled in-house R&D team, fostering collaboration and ownership.

Major Challenge 2:

Navigating complex compliance and regulatory requirements.

@ Solution:

Adopted best practices and worked closely with legal advisors to ensure adherence.

R E S U L T S

- # Successfully launched the escrow digital wallet, a core product for the company.
- # Transitioned all development efforts in-house, enhancing quality and efficiency.
- # Streamlined business operations through automation and process optimization.

- \$ Delivered a robust, compliant fintech product adopted by key customers.
- \$ Improved operational efficiency through automation and optimized workflows.
- \$ Strengthened the company's technical capabilities with a fully operational in-house team.

Carpay's Case Study

Sometimes, Minor change paves the way for Major improvement.

Background:

A Digital Wallet with Escrow Functionality, streamlines secure transactions between buyers and sellers:

1. Buyer initiates a transaction and sends it to seller.
2. Seller confirms the transaction details.
3. Buyer required to verify identity and completed the payment.
4. Seller required to verify identity and completed the transactions.
5. The seller fulfills the transaction, triggering an automatic release of the payment to their account.

Problem:

1. Long and complex process, the ball passes from the buyer to the seller and back to the buyer over and over again.
2. At each stage, it needed to attract user's attention and explain them what is happening now and what will happen next.

As a Result:

1. High dropout rates.
2. Multiple requests for technical support.
3. Customer frustration and low satisfaction rates.

Failed attempts:

1. Improving user experience processes.
 2. Shortening the identification steps (KYC) and moving it to the Onboarding steps.
 3. Accurate and informative copywriting and training content throughout the process.
 4. Ai and human representative support bot 24/7.
- \$\$\$ And the metrics don't change much.

What brought the difference:

1. Data taught us that most of deals are opened when they are already mature, more than 90% of the deals that were opened were actually executed without changes along the way.
2. The main reason why the product was designed in advance so that payment would be a separate step that comes after the transaction is approved by both parties is because the company did not want to absorb the transaction's bank/credit cards fees if the transaction will be cancelled, unless the transaction is fully approved.

After we dealt with this issue extensively, and when I understood the essence of the company's original decision, considering the insights I learned from the information we gathered, I decided that we needed to take a little more risk and shorten the process significantly.

The tweak I made

Before the buyer sends the transaction for the seller's approval, the buyer captures a frame for the transaction, in case the transaction is approved.

In this way, if the seller approves the transaction, they immediately asked to complete the transaction in order to receive payment.

In 95% of cases, we shortened the transaction process by 50% of the steps.

20% decrease in dropout rates

Almost 40% fewer tickets for support

200% increase in customer service recommendations

RestartIT Project

Where I learned the basics

I joined Restart by chance while searching for a job after completing my degree in Communications.

During this search, Yossi Melamed recognized potential in me and offered me an opportunity to join his software company. At the start of 2013, Restart was a small team comprising four developers and IT professionals.

In my initial role as an Account Manager, I was responsible for liaising with clients and effectively conveying their needs and requirements to the development teams.

As the company grew, we successfully expanded our client base, focusing on marketing companies that introduced us to a wide range of new clients and innovative projects. These efforts earned us multiple awards and recognition from leading organizations like Google and Facebook.

Over time, I was promoted to Project Manager and took charge of the entire web development department. By then, the company had grown to 60 developers and IT professionals, with my department comprising 12 full-stack developers.

Together, we delivered a wide range of solutions, including web applications, information systems, games, sophisticated websites, and other complex, large-scale developments.

Some of the clients I worked with during
my time at 

And if you came all the
way here,
I truly appreciate your effort!

Listen to my favorite song:

Famous Blue Raincoat
